

# VULNERABILITY MANAGEMENT AS A SERVICE (VMaaS)

305-828-1003

info@infosightinc.com

## CONTINUOUS RISK INTELLIGENCE THAT DRIVES DECISIONS

VMaaS gives you a continuously updated, third-party view of cyber-risk—translated into clear remediation actions—so you can reduce exposure, satisfy auditors, and prove governance. Powered by the Mitigator Vulnerability & Threat Manager® and guided by seasoned security professionals, VMaaS combines automated detection with expert validation to deliver measurable risk reduction.

**The problem isn't finding vulnerabilities—it's mitigating them quickly.**

## REDUCE EXPOSURE, PROVE GOVERNANCE, EARN CONFIDENCE

- ✓ **Reduce Your Attack Surface** – Faster Mean Time to Remediate (MTTR) shortens exposure windows and blocks lateral movement.
- ✓ **Compliance Mapping & Audit Support** – Align vulnerabilities with frameworks like NIST 800-53 / CSF, HIPAA, PCI-DSS, NERC CIP, CMMC, etc.
- ✓ **Leadership Confidence** – Role-based dashboards and reports show Senior Management and BODs how risk is trending—and why it matters.
- ✓ **Reduced Team Workload** – Findings are validated by expert analysts, so your team can act on what counts.

## WHAT'S INCLUDED

**Ongoing Scanning & Analysis** – Authenticated/unauthenticated scans across internal and external assets with hardened sensors and low-touch coverage.

**Actionable Insight** – Noise removed; only validated, prioritized findings delivered.

**Embedded Expertise** – 3 hours/month of analyst time for remediation guidance, on-demand penetration testing, and compliance mapping.

**Threat Intelligence Correlation** – Mapping vulnerabilities against exploited CVEs.

**Audit-Ready Reports** – Audit-ready documentation and evidence generation aligned with aligned with NIST CSF, HIPAA, PCI-DSS, CMMC, and NERC CIP.

## METRICS THAT MATTER

Boards, CISOs, and auditors don't just want reports—they want proof that your program is improving. VMaaS provides the KPIs that demonstrate maturity:

-  **MTTR (Mean Time to Remediate):** Shows how quickly you reduce exposure when vulnerabilities appear.
-  **Remediation Velocity:** Tracks progress across teams and assets, highlighting bottlenecks and growth areas.
-  **Compliance Alignment:** Evidence of adherence to frameworks like HIPAA, CMMC, or SEC rules.
-  **Trend Reporting:** Continuous visibility into vulnerability aging, risk trending, and remediation rates.

**These metrics aren't just numbers—they validate to your board and auditors that when new vulnerabilities surface, your teams remediate them promptly, ensuring constant network security.**

## EXTEND SECURITY MATURITY

Use VMaaS as the backbone of continuous exposure management. Pair with 24/7 Threat Defense & Incident Response for full lifecycle protection, and add targeted assessments as needed.

-  **Governance & Review Meetings** – Quarterly (or monthly) read-outs with stakeholders to review progress, adjust scope, and align with evolving business priorities.
-  **Closed-Loop Tracking** – Retest confirmation validates that vulnerabilities are remediated, not just discovered.
-  **Board-Level Metrics** – MTTR, remediation velocity, and trending KPIs demonstrate security maturity and progress to leadership and auditors.

**We help organizations stay ahead of risk—reducing exposure windows, accelerating remediation, and making vulnerability management a continuous advantage rather than a compliance checkbox.**

## MITIGATOR VULNERABILITY & THREAT MANAGER® PLATFORM AT A GLANCE

Mitigator provides role-based dashboards, executive and technical reports, and seamless ticketing integration (ServiceNow, JIRA, email). A built-in remediation tracker and retest confirmation ensure vulnerabilities are fixed, documented, and defensible for auditors.

**MITIGATOR®**  
VULNERABILITY & THREAT MANAGER

### TAKE THE NEXT STEP

Are you ready to see how your current vulnerability program measures up?
