InfoSight®
www.infosightinc.com

One employee is the target.

Employee Security Awareness Training

Firewalls don't stop a convincing voicemail from the "CFO."
Attackers have moved past your technical controls and straight to your staff — with phishing, vishing, and AI-generated deep-fakes built to pass as legitimate. InfoSight trains every employee to catch what your systems can't.

WHAT YOUR EMPLOYEES ARE UP AGAINST

Phishing & Vishing

Fraudulent emails, texts, and phone calls engineered to steal credentials or trigger a wire transfer.

AI Deep-Fakes

Cloned voices and synthetic video make impersonation of executives and vendors nearly impossible to spot on sight.

Social Engineering

Manipulation tactics that exploit trust and urgency to bypass every control you've invested in.

Compliance Exposure

PCI DSS, HIPAA, NIST, and ISO 27001 all require documented, recurring employee training.

Untrained employees are the single most exploited entry point into regulated organizations. A structured awareness program turns that liability into your first line of defense — see how InfoSight builds it on the next page.

THE PROGRAM

Training built for how each role is actually targeted

Generic, one-size-fits-all training gets ignored. InfoSight assigns role-based tracks and short, focused video lessons so every employee learns what's actually relevant to their day-to-day risk — and retains it.

EXECUTIVES	IT STAFF	FINANCE TEAMS	GENERAL STAFF
Whaling, BEC & deep-fake impersonation	Privileged access & technical social engineering	Wire fraud & account takeover	Everyday phishing, passwords & physical security

COURSE LIBRARY

- Cybersecurity Awareness Basics
- Email Security
- Password Security
- Avoiding Identity Theft
- Corporate Account Takeover
- Physical Security
- Essentials of Social Engineering

WHY IT WORKS

Short, focused videos keep concepts top-of-mind without pulling staff away from their jobs for hours at a time.

Role relevance means finance sees wire-fraud scenarios, not generic slides — driving higher retention and reporting.

Documented completion gives you the audit trail regulators and cyber-insurers ask for.

COMPLIANCE COVERAGE

Regulated industries are required to prove employees are trained and tested on a recurring basis. InfoSight's program is mapped to the frameworks your auditors already expect.

PCI DSS	HIPAA
NIST	ISO 27001
FFIEC	GLBA
