Rising Cyber Risk Exposure

Organizations today face escalating risks from ransomware, AI-powered threats, and advanced social engineering. Traditional assessments alone are no longer enough. Attackers don't beat security by being smarter; they win in the gaps—between periodic scans, across flat networks, inside untested apps, and through people under pressure.

THE ATTACKER'S CLOCK IS FASTER THAN YOURS

Ransomware gangs adapt faster than you can patch. They use AI to make phishing smarter, hide attacks better, and scan your systems in hours, not weeks. Rules are getting stricter, and bosses won't accept "we have tools" as proof. They want real evidence that your defenses stop actual attacks.

With few experts available, your team needs clear, urgent advice: the top 5 fixes to make first, why they matter, and proof that risk went down.

VALIDATION BUILT IN, NOT BOLTED ON

We test based on your business goals and real workflows—not just checklists.

We show exact attack paths with videos, logs, and data proof—so IT, AppSec, and OT teams know exactly what to fix.

Fixes are prioritized to block attackers fast, cutting risk in days or weeks, not months.

Reports are clear and accountable: they turn tech details into business risks, assign owners, and set deadlines the board can trust.

TURNING CYBER RISK INTO BUSINESS INTELLIGENCE

Our expert testers check your entire setup: networks, apps, APIs, mobile & web apps, and cloud systems.

We act like real hackers, using advanced tools—including AI-powered attack simulations—to find weak spots.

Validate security investments with business-aligned metrics

Justify cybersecurity budgets using board-ready reporting

Align remediation with organizational priorities

Build a continuous threat exposure management roadmap

ASSESSMENT SERVICES

Vulnerability & Penetration Testing

Real-world simulations to uncover exploitable weaknesses.

Red Team / Blue Team Exercises

Measure your detection and response capabilities against live adversary tactics.

Social Engineering

Test organizational resilience against phishing, vishing, and other human-factor exploits.

DELIVERABLES THAT DRIVE ACTION

- **Executive Brief**
 - *Composite exposure score* • Critical/High/Medium summary
 - *Clear business-impact story*—perfect for C-suite, boards, and partners.
- **Technical Report**
 - Full evidence package: CVSS scores, asset details, exploit stories, and step-by-step fix guides.
- **Exploit Evidence**
 - Screenshots, logs, and short videos that show exactly how attacks worked—no debate, faster fixes.
- **Portal Access**
 - Secure access to all findings and reports via the Mitigator platform—track progress anytime.
- **Follow-Through**
 - Exit review: align owners, set timelines, confirm fixes.
 - Optional retests: prove closures and update your security record.

HOW WE WORK

Goal definition and rules of engagement tied to business-critical outcomes

Black/Gray/White-box options; credentialed and non-credentialed techniques

Recon → infiltration → lateral movement → privilege escalation → objective capture

Human-led testing using both commercial and custom tooling; AI used where it increases attacker realism, never as a substitute for expert judgment

THE INFOSIGHT DIFFERENCE

We don't just test for vulnerabilities. We help you understand what each one means for your bottom line, your customers, and your future resilience.

InfoSight's Cybersecurity Risk Assessments ensure that your organization can prioritize what matters most—protecting business-critical assets, securing leadership buy-in, and staying ahead of attackers.

Two decades delivering security, compliance, and exposure-reduction outcomes for complex environments, including OT/ICS, where uptime and safety are non-negotiable. Evidence over opinion. Closure over carry-over.

MITIGATOR
VULNERABILITY & THREAT MANAGER

All results are delivered via our Mitigator™ Vulnerability & Threat Management Platform, with customizable exports for executives, auditors, and regulators.
